5.2	Water Reclamation - Sewer		
	Description	Fee	Unit
	All charges for City wastewater service will be prorated based on a 30-day billing cycle unless otherwise specified.* Charges determined under contract with specific entities may take precedent over fees listed below.		
Monthly sewer charges for all customers include a base charge and a volume charge. The volume charge is calculated using monthly water meter readings of actual water usage, based on a Winter Quarter Average (WQA). WQA is the average water consumption during the billing periods between December and February. Using winter months helps to exclude outdoor water use when calculating the monthly average output of wastewater for households. WQA is recalculated and the sewer volume charge is adjusted annually in July. In the event that the City does not have monthly meter readings of actual water usage data to calculate the WQA, or the WQA calculation is zero for an account, the sewer volume charge will be based on the WQA default value. The WQA default value for single family residential and commercial customers is based on the average monthly winter water consumption for single family homes served by the City of Bend. The current single family residential and commercial WQA default value is 436 cubic feet. The WQA default value for multi-family customers is based on 80% of the average monthly winter water consumption for single family homes served by the City of Bend. The current WQA default value for multi-family customers is 349 cubic feet per unit.			
5.2.01	Single family residential charges		
	a. Base Charge	\$ 40.40	
	b. Volume Charge	\$ 4.24	Per 100 cu ft of WQA
	The water meter volume used shall exclude summer irrigation flows.

	b. Volume Charge	\$ 4.24	Per 100 cu ft of WQA
	The water meter volume used shall exclude summer irrigation flows.

	The non-residential standard customer class refers to non-residential customers that do not meet the criteria to be included in the Extra Strength Charge program.

	b. Volume Charge	\$ 4.24	Per 100 cu ft of WQA
	The water meter volume used shall exclude summer irrigation flows.		
5.2.04	Industrial pretreatment charges		
5.2.04a	Extra strength charges (ESC)		
	Sewer service is provided to all users at a base fee if the wastewater discharged is below the domestic wastewater maximum of 500 parts per million (ppm) of Biochemical Oxygen Demand (BOD) and 500 ppm of Total Suspended Solids (TSS). These laboratory tests evaluate the strength of the wastewater and therefore the amount of treatment needed before discharge of the final wastewater product from the treatment plant. The BOD test indicates the amount of oxygen that is required to reduce the strength of the pollution to an acceptable level, and the TSS indicates how much visible matter is in the wastewater that will need to be separated at the treatment plant.		
	All non-residential users who discharge wastewater into the City wastewater system above the domestic wastewater maximum for BOD and TSS shall pay as described under 5.2.04a. Users discharging at this rate may opt to pay for BOD and TSS discharge on a per pound basis at the rates identified in 5.2.04a7

The person responsible is defined as any owner, agent, occupant, lessee, tenant, contract purchaser, or other person occupying or having the right to occupy a property with manmade impervious surface area. The general service charge shall be calculated by multiplying the ERUs for the lot by the most current per ERU fee as periodically determined by the City. The charge may fund operations, maintenance, replacements and improvements to the stormwater system including payment of debt service for capital improvement bonds.		
	b. Equivalent Residential Unit (ERU): One Equivalent Residential Unit (ERU) is defined as the average amount of impervious surface area on a single family residential lot in the City. The City has determined that one ERU is 3,800 square feet of impervious surface area. Except as may be provided in the Stormwater Credits and Opt-Out Program, the minimum number of ERUs for a lot with any amount of impervious surface area is one. Where the calculation results in a more than 1.0 ERU, the result shall be rounded to the nearest whole ERU.		
	c. Impervious Surface: A hard surface area that either prevents or retards the entry of water into the soil mantle. Common impervious surfaces include: building roofs, walkways, patios, driveways, parking lots, concrete or asphalt paving, gravel roads, and packed earthen materials.		
	d. Residential:		
	1. Single family dwelling is (1) one equivalent residential unit (ERU).		
	2. Two-family or duplex dwelling is (1) one ERU for purposes of stormwater impervious surface coverage.		
	3. Multi-Family – is calculated as non-residential.		
	e. Non-Residential (including multi-family residential):		
	1. Total measured impervious surface is divided by 3,800 sq. ft. and rounded to the nearest whole ERU to determine the total number of ERUs attributable to the property
